Biography

Jack Weber is a project controls and construction strategy leader with extensive experience supporting high-tech and mission-critical capital programs, including semiconductor manufacturing, hyperscale data centers, and federal and government infrastructure. Jack is a valued member of the Project Controls and Construction Strategy team at YA Group.

He designs enterprise-level controls systems that strengthen governance, improve predictability, and influence cost, schedule, and risk outcomes on some of the industry's most complex programs. With deep expertise in Primavera P6, CPM scheduling, schedule analytics, and performance intelligence, Jack has led baseline development and controls strategy for programs ranging from major facility expansions to portfolios exceeding \$1.5 billion in value.

Throughout his career, Jack has developed enterprise scheduling standards, general requirements, and SOPs that shaped how large organizations plan, govern, and execute multi-billion-dollar capital programs. He has advised leadership teams on schedule strategy, risk exposure, change management, and dispute positioning. His work in delay analysis, time-impact evaluation, schedule recovery, and forensic scheduling contributed to recovering critical schedule time, unlocking acceleration opportunities, and protecting or generating millions of dollars in commercial and litigation outcomes. He also supported the resolution of long-running, high-stakes infrastructure programs, helping teams achieve meaningful time and cost recovery in highly complex environments.

Jack is known for transforming complex project data into clear, actionable executive insights. He has helped owners, contractors, and legal teams make confident, high-impact decisions through an approach that blends technical authority, commercial awareness, and practical execution experience—enabling organizations to manage risk, control change, and deliver critical infrastructure with confidence and accountability.
